Experience Picasso's Works in a New Way

Pablo Picasso was fascinated by performers and their ability to transform. He was inspired by the dancers, entertainers and bullfighters he painted. Marking the 100th anniversary of his famous painting *The Three Dancers*, this exhibition, Theatre Picasso, staged by celebrated contemporary artist Wu Tsang and author Enrique Fuenteblanca, sheds new light on Picasso's work. They will transform the exhibition space into a theatre for displaying over 45 works by Picasso. This includes paintings, sculpture, textile and works on paper. Exhibition and Lunch

At 60, mother-of-five Liz Earle is energised, clear-headed, and understands that the way she lives her life will give her the best chance of longevity.

Earle, who sold her beauty company in 2010, isn't one for standing still. She went on to found the *Liz Earle Wellbeing* magazine, continues with TV appearances, launched the charity LiveTwice, hosts a weekly podcast, and

has written 36 books, including her latest, *A Better Second Half*, a manifesto (宣言) for midlife women.

She was in denial about ageing for a while. She says: “I turned 60 last year and I didn’t want to acknowledge it. In my mother’s generation, 60 was grey hair, twinset and pearls, and slippers. I feel so far removed from that stereotype (刻板印象).”

Earle, though, has defied the numbers. When she was in her mid-50s, she had her biological markers of age tested, which showed her biological age to be 39. It’s now 45, but in the next few years she intends on getting that marker down.

In her late 50s, Earle experienced a lot of upheavals in her personal life, divorcing her second husband and failing in investment. “Starting again in my mid-50s was challenging but also energising, because it was an opportunity for a fresh start,” she reflects. “I felt like I was being given a second chance. And I want to encourage other women who feel that they are washed up, too.”

The wellness advice she offers in the book is backed by scientific data, and it’s clear that Earle has done a lot of research in the three years it took to write it; she offers all manner of ways to maintain good health.

She is concerned that midlife women don’t prioritise themselves. “Society marginalises (使微不足道) midlife women — we become invisible, we become irrelevant, whether that’s because we’re losing our looks, or we’re losing our relevance in society. And, actually, that shouldn’t be the case. We’re the clever, wise ones who have lived through it,” she explains. “Ageing is a gift,” Earle continues, “Even when I was running the beauty company, we never used the term anti-ageing well — keeping cognitive function, keeping mobility, having a purpose.”

Now, Earle is embracing all the good things that age has brought her, recently welcoming her first grandchild into the world, and she says she is looking forward to the next decade.

4. Which of the following statements is TRUE about Earle?

- A. She used to work as an employee in a beauty company.
- B. She steps out of the comfort zone and embraces changes.

- C. She believes she fits the stereotype of the 60- year- olds.
- D. She offered wellness advice without any scientific proof.
5. What does the underlined word “upheavals” in paragraph 5 mean?
- A. Unfair treatments. B. Heavy burdens. C. Sharp criticisms.
D. Unpleasant changes.
6. According to paragraph 7, what does Earle encourage midlife women to do?
- A. To fight against ageing. B. To regain their wisdom.
C. To put themselves first. D. To accept plastic surgery.
7. What’s Earle’s attitude towards ageing?
- A. Grateful. B. Fearful. C. Doubtful. D. Pitiful.

For a long time, psychologists believed in “catharsis theory,” or the idea that it’s better to release negative emotions than hold onto them. But back in 2002, Brad Bushman, a professor of communication at the Ohio State University, published a study that questioned that logic, saying that venting (发泄) “is the worst thing you can do” when you’re mad and it’s “adding more fuel to the fire.”

Focusing on a frustrating conversation can blow out of proportion relatively minor annoyances, which is unhealthy, says Jesse Cougle, a psychology professor studying anger at Florida State University.

The problem is that when you’re furious (愤怒的), it feels better to shout angrily than it does to take some centering deep breaths. Bushman has seen that in his research. Even though activities like hitting a punching bag don’t actually lessen anger, “75% of people report feeling better” after they do it, he says. The same is often true for venting to a friend. It feels great to have someone support your perspective.

Can something that feels so good really be so wrong? Bushman says it’s not always a bad thing to get something off your chest. Talking through a

negative feeling with the goal of understanding why something bothered you and how to better respond in the future, such as with a therapist, can be beneficial, he says. But venting becomes less helpful, Coughle says, when it's mean-spirited—when you repeat the same thing you've done many times, keeping yourself stuck in that past anger without trying to move past it.

When you feel yourself getting stuck in the trap of venting, look for healthier coping strategies. If yoga and meditation aren't your thing, try a quick shift in perspective. Bushman's research supports the “fly-on-the-wall” technique, which challenges angry people to imagine themselves as a third party observing the situation that made them angry. And finally, don't underestimate the impact of anger — that is, getting angry when you're hungry. Science suggests it's a real phenomenon. So next time you feel yourself gearing up for a venting session, think of grabbing a snack and taking a few deep breaths instead.

8. What is the traditional belief of venting?

A. Nothing can be worse than venting. B. Venting may lead to worse emotions.

C. Letting anger out always works well. D. Releasing negative feelings is logical.

9. What does the underlined word “that” in paragraph 3 refer to?

A. The problem of venting while angry.

B. The benefit of taking some deep breaths.

C. The temporary relief from venting anger.

D. The lessened anger after hitting something.

10. Why is the “fly-on-the-wall” technique mentioned in paragraph 5?

A. To challenge angry people.

B. To replace yoga and meditation.

C. To illustrate change in perspective.

D. To observe the situation as a third party.

11. What is the passage mainly about?

A. The psychological risk of venting and its influence.

B. The harm of venting anger and its coping techniques.

C. The science of hunger-related anger and its solutions.

D. The development of catharsis theory and its modern debates.

We often think of our environment in terms of what we see, but the sounds that surround us — the soundscape — hold profound power over our emotions and physical health. This sonic environment includes everything from the calming, rhythmic crash of ocean waves to the chaotic, stressful roar of city traffic and the hum of office electronics. Each of these sonic elements can trigger powerful, immediate biological and emotional responses, influencing our state of mind without our conscious awareness.

A growing body of research confirms that natural sounds are particularly restorative. Listening to birdsong or a stream can lower heart rates and reduce stress hormones, aiding mental recovery. In contrast, chronic exposure to noise pollution, like traffic rumble, is linked to increased risks of heart disease, sleep problems, and difficulty concentrating.

However, the impact of a soundscape isn't purely physical or universal; it is also deeply psychological and cultural. As Dr. Eleanor Vance, an acoustic ecologist, explains, the perception of sound is highly subjective. A sound that is annoying to one person might be comforting to another. For instance, the distant whistle of a train might evoke feelings of loneliness or disruption for some, yet it could trigger fond childhood memories of travel or home for others. This personal and cultural filter (过滤) means that our individual histories and backgrounds fundamentally shape how we interpret and are affected by the sounds around us.

This expanding understanding is now driving a global movement to intentionally design healthier acoustic environments. Urban planners and architects are increasingly using “soundscaping” techniques.

This goes beyond simple noise reduction. It involves creating more urban parks with water features whose sound masks traffic noise, implementing designated quiet zones, and using specific building materials to absorb unwanted sound. The goal is not to create absolute silence, but to cultivate a balanced mix of sounds that promotes well-being. By becoming more aware of the sound around us, we can take meaningful steps to create sonic environments that nourish, rather than harm, our quality of life.

12. What is the function of the first paragraph?

- A. To lead in urban noise pollution.
- B. To compare natural and urban sounds.
- C. To explain how human's hearing works.
- D. To introduce soundsapes and their effects.

13. What can be learned from Dr. Vance's explanation?

- A. Urban noise usually leads to health problems.
- B. Natural sounds universally produce calming effects.
- C. The perception of sound is shaped by personal background.
- D. Sound's impact is primarily a physiological reaction.

14. What is the goal of the "soundscaping" movement?

- A. To create perfect silence.
- B. To remove all man-made sounds.
- C. To use nature recordings everywhere.
- D. To create a harmonious sound environment.

15. What is the best title for the text?

- A. Soundscapes: The Pursuit of Quietness
- B. Soundscapes: The Problem of Urban Noise

C. Soundscapes: Shaping Health and Experience

D. Soundscapes: The healing Power of Nature

Leisure Focus: Scrapbooking

The dictionary defines a scrapbook as “an empty book for collecting and preserving photographs, newspaper articles, and other papers.” 16 To learn more about it, we talked with Diane Lucas of Scrapsforever.com.

What is scrapbooking, exactly?

When I make a scrapbook page, I take a few of my family photos and put them into a “layout”—a page that uses fancy paper, stickers, drawings, and words to show the theme. When you make a scrapbook, you put words and pictures together to show the important times in your life. 17

How did you get started?

When I was a child, I loved looking at and remembering things like movie tickets and vacation postcards. 18 When I looked through his desk, I found the most wonderful things—like my parents’ anniversary cards, and photos from his Army days. I couldn’t throw away anything, so I made two scrapbooks, for my brother and me.

19

Oh, yes! We call ourselves “scrappers,” and we love to have big parties where we work on our scrapbooks. We bring our scissors and papers and our boxes of photos. It’s a time for enjoyment, when friends show pictures and tell stories about our families, and our lives. At the same time, we create a book to keep those memories.

Why is scrapbooking so popular these days?

20 When you make a scrapbook, you can pass the stories to your children and your grandchildren. In the U.S. alone there are 2,500 stores that sell paper and other supplies for scrapbooking. You can find scrapbooking websites from other countries. We all have boxes of pictures, and we all want to keep those precious memories. That’s the real meaning of scrapbooking: sharing your family and your story.

- A. It's like a personal history.
- B. Do you know other people who make scrapbooks?
- C. Do you enjoy creating with others at social gatherings?
- D. However, it can be a rather expensive hobby to maintain.
- E. Today, scrapbooking is also a verb and a popular new hobby.
- F. I made my first scrapbook ten years ago, when my father died.
- G. People want to preserve their family history, and display it to other people.

Urban green corridors have emerged as a vital solution to balancing urban development and ecological protection in modern cities. These linear green spaces, covering 36 (resident) areas, commercial districts and industrial zones, connect parks, wetlands and other natural areas, creating a network 37 people can get close to nature easily. We must protect these green spaces because they are crucial to urban ecological balance.

Unlike isolated city parks, green corridors serve as ecological “highways” that link different natural habitats. A recent study 38 (conduct) by a leading environmental research institute shows that cities with well-designed green corridors have more native species than those cities 39. If the corridors are properly maintained, they can effectively reduce the risk of species isolation.

Many cities around the world 40 (invest) heavily in green corridor construction over the past few decades. For example, Singapore has built over 300 kilometers of green corridors, which connect its famous botanical gardens with suburban forests. These corridors 41 (design) to improve people’s quality of life and protect the environment.

To ensure the long-term success of green corridors, urban 42 (plan) work closely with ecologists. They focus on planting native plants adapted to the local climate, as these plants require less care. Additionally, they organize volunteer activities 43 (guide) residents to protect the plants and animals in these green spaces.
